Describe the present and original (if known) physical appearance

### 10 East Chase Street

This 3½-story brick townhouse, laid in common bond, has a three-bay front facade and is fitted with marble facing from ground to first floor level. The same marble is used for the entrance stoop and stairway, door framing, and window sills. Plain brick jack arches are above each window, and each row of windows decreases in height with each successive story rise. The most prominent feature of the house is a decoratively shingled mansard roof with three round-headed windows set into it. These windows are framed by projecting arched moldings above, decorative flat brackets at upper and lower sides, and projecting sills below.

The two basement windows have ornamental cast-iron grills. Two-over-two light sash are used in all other windows of the house, although storm windows have been added. The simple side entrance is enhanced by a shallow-arched marble frame and wooden double-door with arched transom, which opens into a vestibule. A flattened but extremely wide cornice appears to have resulted from later alterations.

Ground Level - Entrance to the first floor is obtained via six marble steps, through a mahogany glazed double door into a vestibule with a tile floor and a large mahogany door into the first floor. Flooring on this level is oak parquet. To the left is a large room with ceiling-to-floor windows facing Chase Street, a fireplace with a simple wood mantel and marble facing around the opening. There is a powder room and another small room, and a large room in the rear with a similar fireplace. There is another powder room to the rear. There is an enclosed stair from this area to the ground level and a rear servants' stair to the top floor. The main stairway and balustrade is directly inside the front door. Ceiling height is 14 feet.

Second Floor - the second floor consists of a large front room, with a simple mantel and fireplace framed with Italian marble and a full bathroom. The middle room, containing another fireplace and bathroom, is entered from the hall. The rear room is identical to the front room, with a fireplace and mantel and a full bathroom. Ceiling height is 14 feet.

This row of three identical 3½-story, two-bay houses (12-14-16 East Chase Street) is constructed of green serpentine marble with contrasting stone detail; it dates from circa 1870-75. The main floor of each is entered from a high flight of marble steps leading to a pointed-arched, transomed doorway with double door, each fitted with a single pane of vertical beveled glass. Above the ground level entranceways, which are separated from the street by decorative iron rails, are shallow projecting balconies with identical iron rails supported by three stone brackets (the balcony to #16 has been removed). Opening onto each balcony are two narrow, triple-hung windows with 1/1/1 lights, surmounted by triangular transoms. These pairs of windows are separated by a stone pier capped by what is, roughly, a diamond-shaped stone inset, decorated with a carved quatrefoil at the center. These pairs are surrounded by a bold, shallowly projecting pointed arch, the ends of which drop to meet a thin, horizontal, projecting molding, which links the system of arches to the hood-moulds of each main entranceway. Other features of the entranceways include chamfered engaged side posts which support tympanums repeating the carved quatrefoil ornament.

ITEM NUMBER 7 PAGE 1

DESCRIPTION, continued

Second story windows have double-hung sash with 2/2 lights. The six windows are individually surrounded with stone frames flush with the facade. Shallow trefoil-arched and pointed lintels with exaggerated keystones project from the facade and are linked by a course of stone. Flattened, triangular panels with floral decoration fill in the central arc below each lintel at the window surface level. The third story windows are similarly individually framed, having pointed, arches which project at equal distance with a course of stone. Double-hung windows with 2/2 lights are topped with flat, triangular transoms.

The elaborate cornice, which returns on the detached end of the row, reinforces the pattern of the bays with double sets of spindle brackets separating the six trefoil cutouts above each window bay. At the attic level, six distinctive hipped-roofed dormers have double-hung sash with 2/2 lights and triangular transom, above which are a pair of stubby brackets. Decorative shingling on the mansar roofs is carried to the jerkinhead of each dormer, where quatrefoils are picked out in shingling material. Cast-iron floral finials terminate each dormer peak. A band of decorative ironwork, making use of the quatrefoil as the chief element in an ornamental motif, completes the composition at roofline.

Third and Fourth Floors - The third floor is identical to the second floor, and the fourth floor, which was the servants' quarters, contains three bedrooms and two baths, which are entered from a smaller hallway. There is a large skylight over the stairwell. Access to the roof is obtained through a ladder and trap door.

In all four buildings, the original interior trim and fixtures have been retained. On the first floor levels, the graceful archways and corner niches are in their original condition. Elaborate balustrades and hand-turned spindles have been restored or replaced.

The typical ceiling molding of this period is still intact. Where louvered interior window shutters and lead pane windows, as well as stained glass windows exist, they have been faithfully restored. These buildings were constructed at the same time, and their floor plans are almost identical. Following is the description of a typical building.

Basement - The basement is reached by a stairway three-quarters of the way toward the rear of the building. It extends to the front of the building where there are the remains of a coal bin and a coal chute to the front sidewalk. The floor is stone set in sand without mortar.

Ground Level - Consists of a large front room with windows opening into a large well recessed approximately 2½ feet below the pavement level. There is a fireplace with simple wood mantel; the opening is framed with Italian marble

## NATIONAL REGISTER OF HISTORIC PLACES INVENTORY -- NOMINATION FORM

10, 12, 14, and 16 East Chase Street  
Baltimore City

CONTINUATION SHEET Maryland

ITEM NUMBER 7 PAGE 2

### DESCRIPTION, continued

Behind this room is a large hallway where the main staircase descends. The rear of this level was originally the kitchen of this house and still contains a large open fireplace approximately six feet tall and five feet wide. To the rear of this room is an enclosed area approximately ten feet by six feet, which is unheated and contains laundry tubs. There is a kitchen door which opens into a yard at ground level. The ceiling height of this floor is ten feet.

First Floor - Upon ascending six marble steps, the first floor is entered through double mahogany doors, which are glazed, into a vestibule with a mosaic tile floor. The main front door is a large single mahogany door, and the main entrance hall is floored with alternate oak and cherry boards. To the left is a small parlor with a fireplace framed in Italian marble with a simple wood mantel. To the right is the main staircase and balustrade.

The rear consists of a large, paneled room with a larger fireplace and an ornate wood mantel with double Corinthian columns flanking the marble framing, a patterned frieze, and molded shelf including one row of egg-and-dart. This room opens onto a porch through two sets of double French doors and has access to the yard via a metal ladder. The ceiling height of this floor is fourteen feet.

Second Floor - Upon ascending the steps to the second floor, there is a large hall with hardwood flooring. The front room is quite spacious. An ornately carved mahogany mantel and Italian marble facing trim a large fireplace. The rear of the building contains a comparable room with marble framed fireplace and a more simple mantel, as well as a full bath.

Third Floor - On the third floor the room layout is identical, except that the rear room does not have a fireplace. Ceiling height is approximately fourteen feet at this level.

Fourth Floor - The fourth floor has a smaller hallway area and consists of three bedrooms and baths which were servants' rooms. The ceiling height at this level is approximately ten feet. There is a skylight above the stairwell, and the rear room also has a small skylight. Access to the roof is obtained via a steep stairway.

### Statement of Significance (in one paragraph)

#### SIGNIFICANCE

The buildings at 10 and 12-16 East Chase Street are examples of the many rowhouses located in Baltimore. Number 10 is a typical Baltimore rowhouse of the second half of the 19th century. With its plain brickwork and amply windows with splayed brick lintels and stone sills, strong corbeled cornice, second Empire-like roof covered with patterned statework, it is a form seen in many similar variations around the late third quarter of the 19th century.

The buildings at 12-16 East Chase Street are, in contrast, more distinctive, showing what intricacies could be wrought if the owner desired. This three-part structure is believed to have been designed by Bruce Price and/or E. Francis Baldwin, architects of neighboring Christ Church. The group is a fine example of the Gothic Revival as interpreted for domestic architecture: ashlar stonework; paired Gothic windows; large, basically pointed arches, constructed of large voussoirs and keystones, over windows and doors; mansard roof with dormers with jerkinhead roofs; and good Italianate detail, such as the cornice and interior trim.

Baltimore is a city well-known for its rowhouses, and these fine examples, both typical and unusual, will continue in use, now as apartments.

#### HISTORY

The construction of these buildings is intimately related to the stewardship of James Hooper, Jr., a merchant miller, who purchased considerable land in the vicinity of Chase Street from the Baltimore City Water Board. In 1870 Mr. Hooper provided the land at the corner of St. Paul and Chase Streets for Christ Protestant Episcopal Church, the second oldest congregation in Baltimore City, to construct their fine, rugged Gothic buildings. Throughout the 1870s, Mr. Hooper's name also appears in the records of conveyances for the Chase Street lots. This supports information provided by the present records of Christ Church to the effect that the land on which the buildings stand was originally intended for use by the church. According to the rector's understanding of his church's history, land was held in trusteeship for the church by Hooper and another church member, William H. Perot, but it was claimed by their heirs in later years and did not pass into the church's hands. Despite original intentions, the land was privately developed for residential use.

It is believed that the Chase Street houses were constructed during the early 1870s, comparable to the time of the erection of Christ Church. It is highly likely that E. Francis Baldwin and Bruce Price, the architects of Christ Church, provided the design for these buildings. Baldwin, an important late 19th century Baltimore architect, is reknown for projects such as the B & O Roundhouse and, with Josias Pennington, the Maryland Club, Mount Royal Station, and the Fidelity Building. Bruce Price, whose most notable architectural enterprise in Baltimore was his contribution to Christ Church, went on to receive national and international recognition for his designs.

ITEM NUMBER 8 PAGE 3

**SIGNIFICANCE, continued**

Born in Cumberland, Maryland, Price came to Baltimore and studied as a draftsman under the architects Niernsee and Neilson from 1864 to 1868. He practiced architecture with Pennington from 1869 to 1872, and by 1877 he had moved to New York to accomplish his major works. His most significant projects outside of Baltimore include the Cathedral in Savanna, Georgia; the Lee Memorial in Lexington, Virginia; cottages and clubhouses at Tuxedo Park in New York; the American Surety Company Building and the St. James Company Building in New York City; the Osborn Memorial at Yale College in New Haven; and the Chateau Fontenac in Quebec. He invented, patented, and built parlor bay window cars for the Pennsylvania and Boston, and the Albany Railroads, and he is also remembered as the author of A Large County House (1887). Price's name appears in land records for the Chase Street lots at the approximate time of the construction of the buildings. It is known that he lived at 14 East Chase Street during his stay in Baltimore, which also supports the case that the building designs were his.

Price's daughter was the internationally famous authority on social graces, Emily Price Post. A native Baltimorean, Mrs. Post was born at 14 East Chase Street, the central house of the Chateausque trio. While famous as the authoress of Etiquette: The Blue Book of Social Usage and Children Are People, she also became an architectural consultant in later years, sharing her father's enthusiasm for building design.

This unit block of East Chase Street continued to be a prestigious residential segment of the Mount Vernon area. William Pinkney Whyte, who had served as governor of the State of Maryland, State Senator, and seven times Mayor of Baltimore, lived across the street at 9 East Chase. Mr. Al Gorter, Mrs. William Manly, and Mrs. William George Brown are among the residents of the area listed in the 1890-91 Blue Book.

In 1903 the majestic Belvedere Hotel was constructed in proximity to the early townhouses. In more recent years, the Monumental Life complex was added to this diversified streetscape. The unit block of East Chase Street is significant as a noteworthy residential and social center in Baltimore since its earliest years.

## HISTORIC PRESERVATION CERTIFICATION APPLICATION — PART 1

(Pursuant to the Tax Reform Act of 1976)

Instructions: Applicant should read the instructions carefully before completing application. No Certification may be made unless a completed application form has been received (P.L. 94-455). Use typewriter or print clearly in dark ink to complete the application form. If additional space is needed to complete Part 1, use the reverse side or a separate plain sheet of paper clearly indicating the owner's name and mailing address. Part 1 of this application may be completed and sent to the appropriate State Historic Preservation Officer at any time during the year, and may be sent separately or with Part 2.

### PART 1 EVALUATION OF SIGNIFICANCE

B-1666 & B-1667

10 East Chase Street

This three and one half story brick townhouse, laid in common bond, has a three bay front façade, and is fitted with marble facing from ground to first floor level. The same marble is used for the entrance stoop and stairway, door framing, and window sills. Plain brick jack arches are above each window, and each row of windows decreases in height with each successive story rise. The most prominent feature of the house is a decoratively shingled Mansard roof and three round-headed windows which are let into it. These windows are framed by projecting arched moldings above, decorative flat brackets at upper and lower sides, and projecting sills below.

The two basement windows are in-filled with ornamental cast-iron grills. Two-over-two lights are used in all other windows of the house, although storm windows have been added. The simple side entranceway is enhanced by the shallow-arched marble frame, and wooden double-door with arched transom, letting into a vestibule. A flattened but extremely wide cornice appears to have resulted from later alterations.

12, 14, 16 East Chase Street

This row of three identical 3 1/2 story two bay wide houses is constructed of green Serpentine marble with contrasting stone detail, and dates c. 1870-75. The main floor of each is entered from a high flight of marble steps running from the house, which leads to a pointed-arched, transomed doorway with double door, each of which is fitted with a single pane of vertical bevelled glass. Above the ground level entranceways, which are separated from the street by decorative iron rails, are shallow projecting balconies which are equipped with iron rails of an identical pattern and supported by three stone brackets (the balcony to #16 has been removed). Opening onto each balcony are two narrow, triple-hung windows with 1/1/1 lights, surmounted by triangular transoms. These pairs of windows are separated by a stone pier capped by what is, roughly, a diamond-shaped stone inset, decorated with a carved quatrefoil at the center. These pairs are surrounded by a bold, shallowly projecting, segmental pointed arch, the ends of which drop to meet a thin, horizontal, projecting molding, which links the system of arches to the hood-moulds of each main entranceway. Other features of the entranceways include chamfered engaged side posts which support tympanums which repeat the carved quatrefoil ornament.

Second story windows are double-hung with 2/2 lights. The six windows are individually surrounded with stone frames which are flush with the facade. Shallow trefoil-arched lintels with exaggerated keystones project from the facade and are linked by a course of stone. Flattened, triangular panels with floral decoration fill in the central arc below each lintel at the window surface level. The third story windows are similarly, individually framed, having pointed, segmental-arched lintels which project at equal distance with a course of stone.

Double-hung windows with 2/2 lights are topped with flat, triangular transoms.

The elaborate cornice, which returns on the detached end of the row, reinforces the pattern of the bays with double sets of spindle brackets separating the six trefoil cutouts above each window bay. At the attic level, six distinctive hipped-roofed dormers have double-hung windows, with 2/2 lights and triangular transom, above which are a pair of stubby brackets. Decorative shingling on the Mansard roof is carried to the jerkinhead of each dormer, where quatrefoils are picked out in shingling material. Cast-iron floral finials terminate each dormer peak. A band of decorative iron work, making use of the quatrefoil as the chief element in an ornamental motif, completes the composition at roofline.

DESCRIBE THE PRESENT AND ORIGINAL (if known) PHYSICAL APPEARANCE	
<p>This three and one half story brick townhouse, laid in common bond, has a three bay front facade, and is fitted with marble facing from ground to first floor level. The same marble is used for the entrance stoop and stairway, door framing, and window sills. Plain brick jack arches are above each window, and each row of windows decreases in height with each successive story rise. The most prominent feature of the house is a decoratively shingled Mansard roof and three round-headed windows which are let into it. These windows are framed by projecting arched moldings above, decorative flat brackets at upper and lower sides, and projecting sills below.</p> <p>The two basement windows are in-filled with ornamental cast-iron grills. Two-over-two lights are used in all other windows of the house, although storm windows have been added. The simple side entranceway is enhanced by the shallow-arched marble frame, and wooden double-door with arched transom, letting into a vestibule. A flattened but extremely wide cornice appears to have resulted from later alterations.</p>

DESCRIBE THE PRESENT AND ORIGINAL (If known) PHYSICAL APPEARANCE					
<p>This row of three identical <math>3\frac{1}{2}</math> story two bay wide houses is constructed of green Serpentine marble with contrasting stone detail, and dates c. 1870-75. The main floor of each is entered from a high flight of marble steps running from the house, which leads to a pointed-arched, transomed doorway with double door, each of which is fitted with a single pane of vertical bevelled glass. Above the ground level entranceways, which are separated from the street by decorative iron rails, are shallow projecting balconies which are equipped with iron rails of an identical pattern and supported by three stone brackets (the balcony to #16 has been removed). Opening onto each balcony are two narrow, triple-hung windows with 1/1/1 lights, surmounted by triangular transoms. These pairs of windows are separated by a stone pier capped by what is, roughly, a diamond-shaped stone inset, decorated with a carved quatrefoil at the center. These pairs are surrounded by a bold, shallowly projecting, segmental pointed arch, the ends of which drop to meet a thin, horizontal, projecting molding, which links the system of arches to the hood-moulds of each main entranceway. Other features of the entranceways include chamfered engaged side posts which support tympanums which repeat the carved quatrefoil ornament.</p> <p>Second story windows are double-hung with 2/2 lights. The six windows are individually surrounded with stone frames which are flush with the facade. Shallow trefoil-arched lintels with exaggerated keystones project from the facade and are linked by a course of stone. Flattened, triangular panels with floral decoration fill in the central arc below each lintel at the window surface level. <del>X</del>The third story windows are similarly, individually framed, having pined, segmental-arched lintels which project at equal distance with a course of stone. Double-hung windows with 2/2 lights are topped with flat, triangular transoms.</p> <p>The elaborate cornice, which returns on the detached end of the row, reinforces the pattern of the bays with double sets of spindle brackets separating the six trefoil cut-outs above each window bay. At the attic level, six distinctive hipped-roofed dormers have double-hung windows, with 2/2 lights and triangular transom, above which are a pair of stubby brackets. Decorative shingling on the Mansard roof is carried to the jerkinhead of each dormer, where quatrefoils are picked out in shingling material. Cast-iron flaral finials terminate each dormer peak. A band of decorative iron work, making use of the quatrefoil as the chief element in an ornamental motif, completes the composition at roofline.</p>
